

Reaction Mechanism Digital Twin

Open-source, vendor-neutral pathway validation | MIT | vicena.ai

Validate

Mapping, charge, spin

16 atoms conserved

Calculate

Saved quantum outputs

27 kcal/mol fixture

Interrogate

TS frequency and IRC

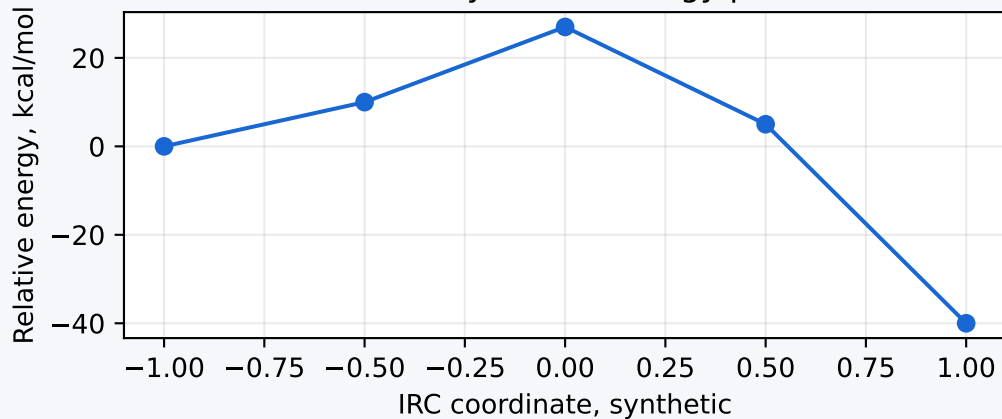

1 imaginary fixture

Compare

Kinetics and uncertainty

0 live Rowan jobs

Archived synthetic energy profile

Define > Optimize > Find TS > Validate Path > Compare

Verified release metrics: 12 local tests, 0 paid jobs,
1 synthetic imaginary mode, 2 synthetic IRC directions.
These values test software, not chemical validity.
