

REACTION MECHANISM ANALYSIS STARTER

OPEN SOURCE

Analyze and validate pathway evidence with explicit limits on what has actually been computed

MIT • Commercial use allowed

Analyze supplied results without implying that an unexecuted mechanism was computed.

Define the system, validate mapping, prepare endpoints, authorize methods, search candidates, validate paths, preserve failures, and compare uncertainty.

DEFINE + VALIDATE

Structures • mapping • charge • spin
Units • conditions • provenance

ANALYZE RESULTS

Energy • rates • conformers
Saved UUIDs • raw outputs

GATE THE TS

Imaginary mode • geometry • mapping
IRC or equivalent path evidence

HONEST BOUNDARY

One real conformer workflow
TS, frequency and IRC not executed

Archived energy logic fixture

Rowan product conformer

1 completed

Rowan conformer workflow

0.37 credits

Provider charge

1 conformer

Saved endpoint geometry

12 tests

Repository baseline checks

EIGHT EXPLICIT STAGES, WITH STATUS AT EVERY GATE
